

Pressure Test Manifold

Pressure test manifold is a completely equipment of hydraulic pressure test, a necessary device for successfully controlling pressure. Different pressure effects can be obtained during test under the control of pressure test manifold.

The materials of pressure test manifold are in strict accordance with API Spec 16C and NACE MR0175 Standards. It is composed of a set of manual slab gate valve, two sets of hydraulic slab gate valves, cross, tee, flange and union, etc.
